## [57] ABSTRACT

A longitudinally ribbed roller is freely journaled within a trough. A portion of the roller extends through an elongated opening formed in a tray overlying the trough. When a pad-type painting tool is moved across the top of the roller a metered amount of the paint carried within the trough is dispensed to the paint applying surface of the painting tool. Upstanding teeth on the roller insure its rotation as the painting tool is drawn across it despite the use of viscous paint.
